

ABDULRHMAN ALNUQAYDAN

OPERATIONS AND GEOSPATIAL DATA LEADER

Riyadh, Saudi Arabia | +966563333463 | abdulrhman@farq.sa

PROFESSIONAL SUMMARY

Operations and geospatial data leader with 7+ years of experience across mapping operations, POI data, nationwide field survey management, data quality, and GIS-enabled workflows in Saudi Arabia. Currently leading a 56-person nationwide field operations organization covering 166 cities and governorates, with 1M+ POIs collected and validated across HudHud Maps, Balady, and Urbi. Experienced in translating complex field operations into scalable processes, quality controls, and digital products. Career spans Google Maps, Urbi, Balady, HudHud Maps, and Takamol, alongside founding Farq Technology and leading product, data, marketplace, and B2B procurement operations.

SELECTED IMPACT

- Lead a 56-person nationwide field operations organization, including data collectors, city supervisors, and regional managers, covering 166 cities and governorates and 777 neighborhoods across Saudi Arabia, collecting or updating 240K+ geospatial records annually.
- Led the collection and validation of 1M+ POIs across HudHud Maps, Balady, and Urbi.
- Build practical QA and data-governance controls for POI datasets, including validation, duplicate detection, audits, exception handling, and corrective action.
- Founded Farq Technology and led the product and operating model for price comparison, supplier discovery, and RFQ workflows across consumer and B2B use cases.

PROFESSIONAL EXPERIENCE

Operations Manager | HudHud Maps

May 2024 - Present

Riyadh, Saudi Arabia | On-site

- Lead a 56-person, multi-tier nationwide field operations organization of data collectors, city supervisors, and regional managers, covering 166 cities and governorates and 777 neighborhoods.
- Collect or update 240K+ POIs annually (about 20K per month). Own coverage planning, workforce allocation, execution, and delivery accuracy.
- Establish audit routines, validation rules, quality controls, and performance tracking to improve the timeliness, consistency, and reliability of field data.
- Turn geographic coverage priorities and field constraints into clear operating plans, workflows, escalation paths, and management reporting.

Founder and Product Lead | Farq Technology

Aug 2025 - Present

Riyadh, Saudi Arabia | Concurrent venture

- Lead product direction, data strategy, marketplace operations, and customer experience for a neutral multi-sector comparison platform.
- Designed data-quality and comparison workflows for large-scale restaurant and grocery offer data, emphasizing freshness, traceability, matching confidence, and reliable provider handoff.
- Built the operating model for Farq Construction, covering supplier discovery, RFQ distribution, structured quotation comparison, governance, and award approval.

Quality Assurance Manager | Balady

Jan 2023 - May 2024

Riyadh, Saudi Arabia | On-site

- Managed field data collection quality for POI datasets and coordinated corrective action across operational teams.
- Applied completeness, consistency, duplication, and accuracy checks to strengthen trust in collected location data.
- Improved quality reporting and issue escalation so recurring defects could be identified, assigned, and resolved systematically.

Operations Team Lead | Urbi

Jan 2022 - Jan 2023

Riyadh, Saudi Arabia | On-site

- Led field operations teams, ensuring timely and accurate POI data collection against assigned geographic coverage plans.
- Developed task-assignment plans, monitored progress, resolved operational blockers, and maintained daily execution discipline.
- Introduced practical quality-control measures and clearer reporting for field-data accuracy and team performance.

Production Specialist | Takamol Holding

Jan 2021 - Jan 2022

Riyadh, Saudi Arabia | On-site

- Coordinated production workflows, tracked throughput and exceptions, and supported accurate delivery against operating requirements.
- Worked across teams to resolve process bottlenecks, maintain quality standards, and keep operational outputs on schedule.

Data Specialist | Google Maps

Jul 2017 - Jan 2020

San Francisco, California, United States | Hybrid

- Supported POI data validation and quality improvement for mapping datasets through structured review and accuracy checks.
- Used GIS tools, geospatial analysis, and mapping workflows to assess location information and resolve data-quality issues.
- Contributed to data standardization, duplicate detection, and consistency checks across map records.

CORE EXPERTISE

Operations Management • Geospatial Data Operations • Nationwide Field Operations • Workforce and Coverage Planning • POI Data • GIS and Spatial Analysis • Data Quality and QA QC • Auditing • Data Validation • Duplicate Detection • Process Improvement • SOP Development • KPI Reporting • Product Operations • Supplier Discovery • RFQ and Procurement Workflows • Stakeholder Management

TOOLS AND METHODS

GIS and mapping tools • GPS and field-survey workflows • Data auditing and reconciliation • Quality dashboards and operational reporting • SQL and structured data workflows • Product analytics and workflow design

EDUCATION

Diploma, Business Administration and Management | Texas Southern University

2017 - 2020

LANGUAGES

Arabic - Native | English - Professional working proficiency
